

Using Core Facility Equipment for Master's Program Coursework

Rationale: The purpose of several courses available through the College of Dentistry is to provide hands on training on certain Core Facility equipment that are part of the iLabs Solution system*. The Core Facility supports our Education Mission in the Masters Programs.

Policy: iLabs administrator (currently Dr. Jane McCutcheon(jane.mccutcheon@nyu.edu)) will set up a course and account number, such as MSBIOM16XXXX. The course coordinator will provide the iLabs administrator with a list of students and NYU Net ID email addresses. Students will be added to the course and their equipment use tracked. No charges will be assessed to the department or to the students.

The exception to the unlimited use policy is as follows: due to high ancillary charges, several pieces of equipment are not available to be used free of charge. These include: the Skyscan MicroCT, the Scanco MicroCT, the histology core, and the Spectro MS Laser Ablation Inductively Coupled Plasma Mass Spectrometer. If students need to use these pieces of equipment, arrangements must be made, in advance, for accounts to be charged.
