How to View Your Chromatogram Files

Each sample generates two files.

- The file ending .seq is a text file and you can open it using Microsoft words.
- The file ending .ab1 is a chromatogram. We strongly recommend that you visually inspect the chromatogram files.

You can download your sequence chromatogram files using the Chromas software:

http://technelysium.com.au/?page_id=13

or register on the LifeTechnologies website and download the Sequence Scanner 2 at:
